Pronunciation.

Vowels

a like English a in at, had, man.

Examples.—ab, father; abadan, never; ana, I; dahab, gold; samak, fish; ma'laqa, spoon; nahl, date-palms; nadah, he has called; naddâra, spectacles, eyeglasses, opera-glass; wara, behind; wa'ad, he has promised; jitkallimu, they speak, will speak; jistannak, he waits for you; wala, or.

â like English a in ah, bar, father.

Examples.— âle, tool; bâb, door; śâif, seeing; śâf, he has seen; lâ, no; mâward, rosewater; mydân, square, public place; mylâd, Christmas; nâr, fire; nâmûsyje, mosquito-net; wâḍiḥ, clear, distinct, plain; jâfa, Jaffa; jômên, two days.

e like English e in bed, ell, send.

Examples.—el, the; esne, Esne; efendy, Mr., gentleman; gebel, mountain; gedyd, new; kelb, dog; megâwir, student; we, and.

ê like English ev in they, or ay in say, layer.

Examples.—etnên, two; êś, what; bêḍ, eggs; °êb, shame; °êś, bread; fên, where; qarêt, I have read; lê, why; lêl, night, evening.

i like English i in begin, sip, till.

Examples.—ibn, son; isbitâlje, hospital; iswid, black; inglyz, English; imte when; inte, you; kilme, word; misik, he has seized, grasped.

y like English ie in fiend, ea in steal, or ee in eel.

Examples.—yd, hand; imśy! go away! byr, well; byra, beer; sittyn, sixty; 'yd, festival; mâlyje, finance; myn, who; naggâryn, carpenters; wazyr, vizir.

O like English o in not, offer, yonder.

Examples.—obêra, opera; oġostos, August; bortuqân, orange; hod! take! 'osmânly, Ottoman; moqaţţam, Mokattam.

ô like English o in note, over, so, throne.

Examples.—ôḍa, room; bordô, Bordeaux, claret; bôsta, post, post-office; rôsto, roast; kôm, hill, mound; nôba, time, once; jôm, day.

U like English u in full, pulley, put.

Examples.—uht, sister; umm, mother; gurnâl, newspaper; tult, third; dukkân, shop; qumşân, shirts; kutub, books; muslim, Moslem; muftâḥ, key; wusṭ, middle.

û like English oo in fool, ooze, soot, stool.

Examples.— bûlâq, Boulak; gûwa, in, within; hûwa, he; dûd, worms; malbûs, clad, dressed; kalûn, lock; nûr, light.

Consonants.

b like English b.

Examples.—abryl, April; arnab, fox; ibtada, he has begun; bâśa, pasha; balţô, overcoat; bêt, house; tibn, straw; sabab, cause; kitâb, book; maṭbaʿa, printing-office, press.

t like English t.

Examples.—etnâśar, twelve; itkallim, he has spoken; banât, girls, daughters; bintû, Napoleon, twentyfranc piece; taufyq, Tewfik; telât, three; telefôn, telcphone; tôr, ox, bull; ḥâgât, things; kittân, linen.

t like English t, but with a rounding of the lips (as in forming the letter o), and with slightly greater stress.

Examples.—iţţala^c, he has studied; ţanţa, Tanta; ţêr, birds; ţyn, clay, soil; aţŝân, thirsty; quţţa, cat; labbaţa, confusion; jiţla^c, he ascends, he comes out.

g like English g in bag, dagger, give, go.

Examples.—agrûmyje, grammar; gamal, camel; gamb, side, beside; hagar, stone; faggâl, radish-seller; figl, radish; jigy, he comes.

 \dot{g} like a strongly-aspirated, guttural r.

Examples.—aģa, aga; baġl, mules; ġada, breakfeast, lunch; ġasal, he has washed; śuġl, business, work; luġa, language; maġrib, west; jiġsil, he washes. h like English h in have, hear, behind.

Examples.—allâh, God; azhar, Azhar mosque; gihe, direction; hene, here; hyje, she; hum, they; zahr, flowers; muhandis, engineer; jahûd, Jews.

h like English h in horde, but slightly more aspirated.

Examples.—aḥmar, red; tiftaḥ, you open; ḥabl, rope; ḥêṭ, wall; iḥna, we; ḥumâr, donkey; sâḥiby [saḥby,] my friend; maḥall, place, spot.

h like German ch in ach, doch, Sache, or Scotch ch in loch.

Examples.—tabbâh, cook; habar, news, information; hamse, five; duhhân, tobacco; hâif, fearing; kutubhâne, library; mahzan, magazine, warehouse.

d like English d.

Examples.—edfû, Edfu; tadrus, Theodore; gedyd, new; dôl, these; durûs, lessons; madne, minaret.

d like English d uttered with a rounding of the lips and slightly greater stress.

Examples.—aḍrab, *I strike;* arḍ, *earth;* ḍilim, *dark;* ḍuhr, *noon;* ʿaḍm, *bones;* naḍâfe, *cleanliness*.

r like English r, but slightly more rolling.

Examples.—arba^ca, four; berins, prince; râgil, man; rûḥ! go! qirś, piastre; kafr, village; marratên, twice.

z like English s.

Examples.—gezyre, island; ruzz, rice; zamb, mistake; zêj [zaj], as, how; zêt, oil; mazbût, firm, secure.

S like English s in sad, side, mouse.

Examples.—asmar, brown; iswid, black; bess, only, enough; râs, head, cape; saijid, gentleman; sâ°a, hour, clock, watch; sellim, stairs, ladder.

S like English sh in fishing, shall, mesh.

Examples.—haśab, wood, timber; haśś, he has stepped in, entered; śaijâl, porter, bearer; śê, thing; śuwaije, some, a little; °êś, bread; miśmiś, apricot; muś, not; wiśś, face, visage.

S like English s, but with a rounding of the lips and somewhat greater stress.

Examples.—aṣfar, yellow; baṣṣ, he has looked at, gazed at; raḥyṣ, cheap; ṣala, prayer; ṣuġaijar, small, little; ṣôt, voice; maṣr, Cairo, Egypt; waṣfe, description; wuṣûl, arrival.

c an explosive articulation, made by compressing the air-passages deep down in the throat.

Examples.—it allim, he has learned; gy an, he is hungry; za an, he has cried out; azym, glorious, splendid; aly, high, Ali; an, eye, spring; neby, we will sell; ji mil, he makes, he does.

f like English f in after, find.

Examples. — afryqa, Africa; alifbê, alphabet, ABC; fâr, mouse; febrâjir, February; fihimt, I have understood; kaff, palm of the hand; nafar, people; nafs, soul, self.

q is in Cairo a catching (or quick, forced expulsion) of the breath; in other parts of Egypt like the English g in gourd, but somewhat deeper and stronger.

Examples.—baqar, cattle; daqq, he has struck, knocked; sûq, market; qauwâs, cavass, consular messenger; qunşul, consul; maqaśśe, broom.

k like English k.

Examples.—akl, food; ḥanak, mouth; sikkyn, knives; katûlyk, Catholic; kân, was; kull, all, the whole; lâkin, but; makkâr, s/y, sharp.

l like English l.

Examples.—atkallim, I speak; almânje, Germany; tell, hill; lau, if; laban, milk; lêlât, nights; luqsor, Luxor; jûlje, July.

m like English m.

Examples.—a°ma, blind; embâreḥ, yesterday; ḥaddâm, servant; sama, heaven, sky; lamma, when, after, so that; maksûr, broken; min, from; myl, mile; minje, Minieh; nôm, sleep; jômâty, daily.

n like English n.

Examples.—enhu, which; tâny, other, second, again; nabolitâny, Neapolitan; nâr, fire; nâs, people; fingân, cup; jasmyn, jasmine.

W like English w.

Examples.—uwad, rooms; ṭawyl, long; sawa, to-gether; maswaqa, whip; wabûr, steam-engine, steamboat,

locomotive, train; wahry, late; wâhid, one; widn, ear; jigâwibu, they answer.

i like English y in yet, yesterday, youth.

Examples.—iţâlje, Italy; yjâm, days; tamanje, eight; hyje maṣryje, she is a Cairene; ʿaṣâje, stick, cane; lyje, to me; jasyr, prisoner, captive; jâkul, he eats; jegyb, he brings; jeqûl he says; jigu, they come; jitkallim, he speaks; mâ jiḍrabś, he does not strike; jâ salâm! good gracious! jekuḥḥu, they cough; jimla, he will fill; jûsif, Joseph.

Diphthongs.

ai like English i in irate, life, right, or ei in height.

Examples.—aiwa, yes; istaraijah, he has rested; baijad, he has whitened, whitewashed; tultai two thirds; haiwân, animal; saijib, he has let go, let loose; 'aijân, ill, sick; kuwaijis, pretty, nice, good; mitbaijin, showing, appearing; jedaija', he will lose.

all like English ou in out, sound, or ow in now.

Examples.—aurâq, papers, documents; auwal, first; bauwâb, doorkeeper, hall-porter; rauwaḥ, he has gone away, gone home; 'auwaq, he was delayed; fauwâl, dealer in beans; mauwut, he has killed; medauwar, round, circular; mestaufy, complete; wazaq meqauwa, paste-board; nauwâr, blossoms.

The Egyptian word for water varies greatly in its phonetic expression—maije, moije, moije, moje. The second of these forms seems to be an almost unique example of a third diphthongal combination, namely, oi.

To the English Learner.

Those who are familiar only with the English alphabet have merely to bear in mind that

j is always pronounced like English y in the words yes, your, yield, yeoman, steelyard,

as, for example, in the Egyptian vocables:—agrûmyje, (grammar), iţâlje (Italy), gam'yje (society, assembly), lyje (to me), myje (thousand), jallah! (go ahead!), jerûh (he goes, he will go), jemynak (your right), jigy (he comes), jiśrab (he drinks, he will drink), jôm (day), jûsif (Joseph), jûnje (June).

Likewise it must be remembered that

y is always pronounced like ie in the English wield, or ee in steel, or e in me,

as, for example, in the Egyptian words:—yd (hand), battalyn (bad ones), byr (well), tyn (figs), taijibyn (good ones), tawyl (long), kebyr (great, big), ketyr (much, very), myl (mile), mylâdyje (Anno Domini), myn (who), nyl (Nile), jesûfny (he sees me).

The Story of the Alphabet.

The alphabet here represented and explained is that of the living language of Egypt. It consists of thirty-four letters, of which the first ten express pure vowel sounds five short in their nature, and five long. No existing tongue possesses an alphabet embracing so wide a vocal range, and at the same time of so simple a character; and few nationalities can boast of one which can be so rapidly acquired, or so readily applied both in writing and printing. It may be generally described as a modification of the Latin letters, devised with no little ingenuity, and adapted with no little skill to the vocabulary in use, at the present day, by the inhabitants of the Nile valley. Properly speaking, it is not to be regarded as a system of transcribing, or transliterating, the elements of any other alphabet, but rather as an independent ABC, specially elaborated to express, in the clearest and most convenient manner, the vocal and consonantal articulations of this newest Egyptian tongue. It is to be treated as belonging to the Egyptians, just as the German alphabet belongs to the Germans, or the Greek alphabet to the Greeks, or the Persian alphabet to the Persians. It is not intended to be used in writing any other form of speech, and, in particular, it cannot be employed, without material alteration and extension, in writing the classical or Koranic Arabic—often styled the Old-Arabic—which is the parent of the modern Egyptian. Its component letters are here arranged, to some extent, morphologically—a method which, as a noted English writer tells us, "is very convenient for the learner; letters of similar form being brought into juxtaposition, it becomes easy to compare them, and to remember minute distinctions in their outlines." 1) But the classification of the letters is not a matter of grave importance. The Old-Arabic alphabet, as it has been, in the course of time, adopted and adapted by various Asiatic nations, differs more or less, in each country, in order and extent, from its primitive. We have grown accustomed, too, in these days of investigation, to see all alphabets arranged, by the grammarians, for their special purposes, in differing groups in accordance with varying schemes of collocation or of classification. This new alphabet — so simple vet so complete - owes its origin to that most ardent friend of the Egyptian people—that most zealous and most successful of all students of the Egyptian dialect,

Wilhelm Spitta,

who was born June 14, 1853, in the little Hanoverian town of Wittengen, and died at the baths of Lippspringe, in the principality of Lippe, September 6, 1883. Within the narrow limits of an existence of three decades it has rarely happened that a single brain has wrought so much and wrought so well. But that brain was fortunate enough to discover its proper field of study and energy at an extraordinarily early age. While still young, Wilhelm lost his father, the lyric poet, Philipp Spitta, from whom he inherited the quick intelligence and early mental maturity, which enabled him to begin his Oriental studies even during his gymnasial years. These were passed at Hildesheim, the

¹⁾ The Alphabet by Isaac Taylor (London, 1883), I, p. 189.

picturesque cradle of North-German art, whence, after a brilliant exit-examination, he entered the university of Göttingen at the Easter term of 1871; but ultimately, having meanwhile undergone his year of military service, he transferred his studies, for the sake of the Arabic instruction of Heinrich Fleischer, to the university of Leipsic, at which great school he took his doctorate early in 1875. So evident and so eminent were his qualifications for the post that, through the efforts and recommendations of his teacher, Fleischer, and of the Egyptologist, Georg Ebers, he was appointed, while still an undergraduate in the university, the successor of Ludwig Stern as director of the Viceregal Library which had been founded at Cairo in 1870 by the khedive Isma'yl. He assumed the duties of this office April 5, 1875—not yet twenty-two years of age. The following year he published at Leipsic his valuable tractate, "Zur Geschichte Abucl-hasan al Ascharîs"—a paper first drawn up in order to serve as his doctor's dissertation. This was succeeded later on by various contributions to the Oriental journals of Europe; it was followed, as well, by numberless hours of ready and ungrudging help to students and others, who sought his scholarly aid, and by generous counsel and assistance in all undertakings promising to be of advantage to Egypt, its people or its letters. But to all outward appearance his heart was most of all in his official work. When, on April 19, 1882, he was deprived by the minister of education of the position he had so ably filled - a consequence of the oligarchic fanaticism which had raised the ignorant 'Araby and his fellow conspirators to power—he could write to a learned compatriot thus:—" In truth the existing organization of the Library, in all its departments, is my work. I have re-arranged and catalogued, with my own hand, its European section; of the Oriental division I have compiled a card-catalogue by authors, with shelf-lists, and have very nearly ready for the press two big volumes of a scientifically-classified catalogue. I have brought the collection from 13.000 volumes to 30.000—of which 20.000 are Arabic, Persian and Turkish manuscripts. The present personnel is my creation, and I have even taught the art of cataloguing to my successor. All this has been the labour of seven hard years." These "seven hard years" were more fruitful for Egypt, as we shall hereafter see, than were the Pharaonic "seven years of great plenty."

Those who had the good fortune, as did the writer of these pages, to see Spitta bê engaged at his work in the important Cairene collection of books, were amazed at both the quantity and the quality of the labour he was accomplishing. He seemed to them the model librarian—a combination of the highest intelligence with the highest faculties of administration and industry. Little did many of his interested visitors dream that those long hours of diligence represented the less valuable portion of the task he had assigned himself. Few, certainly, of his European associates, understood that outside of that not very wholesome edifice in the darb el gamâmyz, in which were housed the precious volumes under his charge, he was building himself (during hours which should have been hours of restful leisure) a monument which can never decay. He made his home, from the beginning, in an Arabic household, and during much of his unofficial time came into contact only with natives, taking down from their mouths, with untiring assiduity, glossaries, idiomatic sayings, proverbs and popular tales. Amid these surroundings, or arranging, during his summer vacations, the abundant material thus accumulated, he at length brought

to a conclusion, before the earliest five of his "seven hard years "had completely elapsed, his systematic investigations into the living speech of Egypt. The result was, as has been more than once remarked, "the first scientific treatment of a modern Arabic dialect; " and not often has a first treatment been so exhaustive. His "Grammatik des arabischen Vulgärdialectes von Aegypten "was published in the latter half of 1880, and was followed by its supplementary volume, the "Contes Arabes Modernes" in 1883—almost in his dying hours. These two works form, perhaps, the most remarkable contribution to Oriental linguistics during the last quarter of a century, and are, in every respect, models of philological research and statement. No one who has read the deeply-interesting preface to the "Grammatik" can doubt the warmth of the hope which he entertained that the work—as his biographer expresses it—" might contribute to the elevation of the spoken dialect into a written language, thereby bridging over that deep chasm between the idiom of the people and the idiom of literature, which is the greatest obstruction in the path of Egyptian progress."

The striking and forcible paragraph which closes the preface has been frequently cited, but a translation of it here can hardly be out of place:—" Finally I will venture to give utterance to a hope which, during the compilation of this work, I have constantly cherished; it is a hope which concerns Egypt itself, and touches a matter which, for it and its people, is almost a question of life or death. Every one who has lived, for a considerable period, in an Arabic-speaking land knows how seriously all its activities are affected by the wide divergence of the written language from the spoken. Under such circumstances there can be no thought of popular culture; for how is it possi-

ble, in the brief period of primary instruction, to acquire even a half-way knowledge of so difficult a tongue as the literary Arabic, when, in the secondary schools, youths undergo the torture of its study during several years without arriving at other than the most unsatisfying results? Of course the unfortunate graphic medium—the complex alphabet is in great part to blame for all this; yet how much easier would the matter become if the student had merely to write the tongue which he speaks, instead of being forced to write a language which is as strange to the present generation of Egyptians as the Latin is to the people of Italy, or the Old-Greek to the inhabitants of Greece - a language which, without being the popular speech, is no longer even the classical Arabic! A real literature cannot be thus developed; for only the limited cultivated class knows how to use a book; to the mass of the people a book is really a thing unknown. If he have need to write a letter, or execute a document, the ordinary man of the people must put himself blindly into the hands of a professional scribe; he must trustingly sign the most important papers with a seal which he cannot read, and which may be and is easily imitated. Why can this lamentable condition of things not be changed for the better? Simply because there is a fear, if the language of the Koran be wholly given up. of incurring the charge of trespassing upon the domain of religion. But the Koranic language is now nowhere written; for wherever you find a written Arabic it is the Middle-Arabic of the offices. Even the dubious unity of the Islamitic peoples would not be disturbed by the adoption of the spoken vernacular, since the language of prayer and of the ritual would still remain everywhere the same. It is also asserted that the New-Arabic is wholly unfit to become the language of the pen because it obeys no fixed

laws, and flows on without any syntactic restrictions. I venture to believe that the present publication proves that the speech of the people is not so completely incapable of discipline; that, on the contrary, it possesses an abundance of grammatical niceties; and that it is precisely the simplicity of its syntax, the plasticity of its verbal construction, which will make it a most serviceable instrument. Did the Italian seem any more promising when Dante wrote his Divine Comedy? And would a commission of the most learned and most expert men of Egypt, not be able to do infinitely better that which it has not appeared to me, a foreigner, too difficult to undertake?"

The distinguished Eduard Meyer — himself a sad loss to the ranks of Germany's orientalists before he had reached his real maturity — was Spitta's most intimate associate in his university years and afterwards. He thus describes Spitta during his Leipsic days: —" He had an aspect full of vigor and comeliness: the weakness which had affected him in his boyish years had completely vanished; and no one who looked at him could have divined that he was doomed to be a victim of pulmonary disease. The strong moral seriousness and lofty nobility of his nature were evident in everything he did or said. " The same friend affectingly adds: - "Personally I know not how to do him other honor than to declare thus publicly that the greater part of whatever I may either intend, or may accomplish, will be based upon principles which we unitedly developed." As early as the last months of 1877 his physical appearence already showed slight changes, but in the winter of 1880-81 he was still a striking and attractive personage - perhaps handsomer because of the hectic flush which tinged his cheeks, and presaged the sure fate awaiting him. In society he was often modestly reticent, but when he did talk the listener soon

recognized the depth and breadth of his knowledge. He was familiar with most of the languages of Europe, and with all of those of the east which have adopted the Old-Arabic alphabet, although his Oriental studies began with the Sanscrit. In the literature of bibliography, and of bibliothecal management he was well versed. Like all his family he was fond of music, which was almost his only diversion; and his finely-trained ear stood him in good stead in testing and fixing the fluctuating and uncertain vowel-sounds of Egyptian speech. One may occasionally doubt the correctness of his transcription, but after hearing the word in question pronounced by a dozen different native voices the decision is generally in favor of the Spitta orthography.

Looking back upon the hours of intercourse with him, and recalling a thousand instructive incidents indicating his extraordinary intellectual capacity, it is impossible not to wonder what a score of years, added to his scanty score and a half, might not have enabled him to accomplish. But whatever his additional achievements might have been it is certain that they would have largely benefited the Egypt he so loved - how deeply and truly may be judged from the concluding words (the very last he wrote) of the introduction to his "Contes Arabes Modernes: "-" Au moment où j'écris ces lignes, je vais quitter l'Égypte probablement pour toujours, assurément pour longtemps. Je serais content si, par les pages suivantes, je gagnais quelques nouveaux amis à la vieille Égypte populaire, humble et cachée, mais forte par la chaleur intérieure de sa vie, par l'intimité et la naïveté de ses sentiments — à cette Égypte inconnue des financiers et des diplomates, qui, depuis les Pharaons jusqu'à nos jours, a survécu à toutes les civilisations. "

Preceding Steps and Studies.

What the Germans style the "Transcriptionsfrage" which may be loosely defined as the question of writing extra-European languages by means of a European or modified European alphabet — has produced a considerable literature. The history of this branch of philological work cannot, of course, be portraved here at any length. The efforts of English scholarship, so far as this kind of research is concerned, have been chiefly limited to the languages of India. They began with an essay by Sir William Jones — a man memorable in many ways — "On the Orthography of Asiatic Words in Roman Letters" (1788). His observations show great insight, technical and otherwise, for he objects to the use of "double letters" to express a single vowel sound, and to the intermixture of "Roman and Italic letters" in the same word, which, he remarks, "both in writing and printing would be very inconvenient." He did not however adopt throughout the principle of "one sound, one letter; " and the little he attempted in the transcription of Arabic, evinced a marked deficiency of knowledge in regard to the phonology of that tongue. He insisted on giving to the European vowels their Italian values, but in the crude condition of philological studies, at that time, he failed to see that the English consonantal system is, in many respects, as barbarous as its vowel scheme. On the whole, however, he exhibited qualities which were hardly again united in the same mind until the appearance, more than two generations later, of Lepsius and Spitta. But his good endeavours were thwarted by an inferior scholar, John Gilchrist, who, in his grammatical and lexicographical works on the Hindustani (1787-1796), adopted, in his transcriptions, the English alphabet pure and simple, heedless of its defects and anomalies. It is Gilchrist who is responsible for the uncouth orthography of Indian local and personal names so long prevalent in English publications, and not yet wholly abandoned. Sometime after 1830 Sir Charles Trevelyan, a man of varied ability and familiar with many of the Indian idioms, made a serious attempt to recur to the methods of Sir William Jones which partially succeeded 1); later on Max Müller, as we shall hear, proposed a complete revision of the previous method of transliteration, but his combination of Roman and Italic letters, long before justly condemned by Sir William Jones, gave evidence of that want of proper aptitude for this kind of labour, which has been common to many minds o'therwise of high philological astuteness. Dr. Caldwell, Sir Monier Monier-Williams 2) and the Rev. George Uglow Pope, as well as a special committee of the Madras Literary Society, followed in the track of Trevelyan, the second-named displaying great good sense, but some of the others clinging to the clumsy double consonants (especially ch and sh).

In France the acute, but not always profound Volney was the first to take up with seriousness the subject of expressing Asiatic and African vocables by means of European letters; he did this in connection with the publication of the results of the Napoleonic scientific survey of Egypt (1795), and, at a subsequent period (1818),

¹⁾ Original Papers illustrating the History of the Application of the Roman Alphabet to the Languages of India, by Sir Charles Edward Trevelyan, edited by Monier Williams (London, 1859). Interesting reviews of these papers appeared in the London Athenaum (1859, II, p. 628), in the Calcutta Review (July, 1864) and in the London Reader (1863, II, p. 604 and 1865, I, p. 598).

²⁾ Bagh o Bahar: the Hindustani Text of Mir Amman: edited in Roman Type, with Notes, and an introductory Chapter on the Use of the Roman Character in Oriental Languages, by Monier Williams (London, 1859).

presented a more carefully elaborated scheme. In his earlier method he employed two characters to represent a single sound in only a single case, but his mixture of Greek and Latin letters, and some of his peculiar graphic modifications of the Latin alphabetical signs made a writing at once unseemly and complicated; his final alphabet was an improvement, but his mingled Italic and Roman letters, his superlinear letters, his retention of several Greek letters, as well as some other features of his alphabet, kept his text still far from sightly. The Germans were late in the field, but, as in so many other portions of the linguistic domain, their labors were more fruitful. In his Latin transliteration of Sanscrit words Bopp (1833) led the van in forsaking the unsystematic modes of transcription, but was soon followed by Brockhaus, Benfey and the whole Sanscrit school—one of Germany's greatest glories—while, in treating in the same way the Old-Arabic alphabet, the late Karl Paul Caspari and Fleischer were not slow to make important innovations in the right direction.

In the meantime physiology had come to the aid of philology, and the new science of phonology was growing up. This led to a treatment of the subject on a wider scale as well as by juster methods. Moreover a new stimulus from a novel source was given to these alphabetical studies. It was in 1848 that the Rev. Henry Venn, the secretary of the Church Missionary Society in London, issued his "Rules for reducing unwritten Languages to alphabetical Writing," for the benefit more particularly of missionaries in various parts of Africa. In many other quarters the subject was now taken up with energy. The accomplished Christian Bunsen—then Prussian ambassador in England—enlisted several noted philologists and other scholars in the movement, summoning them to a conference

in London. Among those participating were Trevelyan, who still supported the alphabetical ideas of Sir William Iones, and Max Müller, 1) who devised and advocated an entirely new scheme to which allusion has already been made, but which was soon overshadowed by that emanating from Berlin. In that city Richard Lepsius, incited by the missionary organizations, interested himself in the matter, for the treatment of which his previous studies had specially fitted him, soon producing his "Standard Alphabet" (1855), and ultimately a second edition (1863) with modifications. 2) Between these two issues came his treatise "Ueber die Ausprache und die Umschrift der arabischen Laute" (Berlin, 1861). The "Standard Alphabet" is a vast contrivance of nearly eighty sonant expressions, notable beyond all preceding efforts for its technical excellence, and for the evidence of common sense, as well as of scholarly research, which characterizes it. Five diphthongs are expressed by double vowels; nine letters are either derived from the Greek alphabet or are arbitrary signs; and the remainder are all Latin letters modified by diacritical marks. It includes a distinct representative of every possible variety of human articulation. But its chief utility is in furnishing a written medium for the wholly uncultivated tribal tongues — unconnected, even remotely, with any form of written speech — and in which it seems unlikely that any great printed literature will ever exist;

¹⁾ Proposals for a Missionary Alphabet by Max Müller (London, 1855, with a folio volume of alphabets). As late as 1867, when his "Outline Dictionary" was published, Professor Max Müller, in his transliteration of foreign alphabets, still made use of both Italic and Roman letters.

²⁾ Standard Alphabet for reducing unwritten Languages and foreign graphic Systems to a uniform Orthography in European Letters, by C. R. Lepsius (London, 1863, but printed in Berlin). The slight historical sketch of the subject here given is greatly indebted, for its facts and dates, to this second edition of the treatise of Lepsius.

in that aspect it has undoubtedly been a boon to the missionary world. For other purposes it has proved less useful; and it has never been generally applied to any considerable linguistic group.

Spitta's Work.

With all that had thus been discussed and done by the preceding scholars—English, French and German whose names have here been cited, and by many others to whom no reference has been made, Spitta was minutely familiar. He approached the alphabetical part of his task, however, with the sole idea of evolving the simplest and clearest medium of expression for a language which was, as yet, unendowed with any, but which was the daughter of a tongue possessing one too cumbersome for national use, too complex in its character for the purposes of modern life. Although still an unwritten speech it was destined, unless all the experience gained from the history of linguistic development be misleading, to blossom out, at no remote date, into the flowery freshness of a new literature. Spitta was, perhaps, the only available person of his day, who could look at his undertaking, as it grew into realization, from every point of view. He possessed all the imaginable qualifications for his task—not a few of which, as has already been stated—had been notably lacking in those who had heretofore occupied themselves with the invention or designing of alphabets—with the evolution of schemes of transliteration. He was not only an able philologist and phonologist, but he perfectly understood every phase and feature—even those technical subtleties generally known only to the expert—of the arts of writing and printing. This is a most important consideration, for an alphabet must serve three very dissimilar ends—it has to be read, it has to be written and it has to be printed. A scholar may know whether the alphabet be such that, through its proper expression of the proper sounds, the language can be satisfactorily read, but only the calligraphist can decide whether it be fit for the purposes of chirography, only the printer can judge whether it be available for the aims of typography. Want of this technical availability has recently resulted in the speedy condemnation of a method of transcribing Arabic, adopted, after much learned travail, by a congress of Orientalists—a method which, at a glance, shows the absence of any practical, artistic or mechanical expertness in the committee which devised it; for it employs signs inconvenient in calligraphy and nearly impossible in typography. 1)

The alphabet of Spitta uses a single Latin character to express a simple phonetic element—an absolutely essential condition—such combinations as ch, gh, kh, sh finding no place in it, and indeed no literal combinations whatever being used except those representing the diphthongal ai and au. This avoids every chance of obscurity, for if you use s as one sonant sign, h as another, and sh for a third

I) A diacritical sign frequently used in the system of transliteration for Arabic, reported by a committee to a late Congress of Orientalists at Geneva, is made by the awkward process of a stroke backward, followed by a stroke forward - an operation which will not commend itself to the calligraphist. What would the writer of English think, if instead of dotting the i he were constantly obliged to complete this double stroke? Among the letters to which this diacritical wonder must be subscript is the g (to represent the cgén) - but the downward extension of the printed g already goes as far below the line as is possible without impinging upon the type below it. How do the astute devisers of this scheme propose to get the type-founders to cast, or the printers to use such an impossible type? Unless they intend to cut off the lower end of the letter, and put the sign under the tail of the g as it were, the mark must at best be made too minute to remain long unbroken. But when the student has fairly decided to learn and to employ this congressional method of transcription he will find that, after all, he need not feel himself obliged to adhere to it, for he is told that, in many cases, in place of the transliterating letter the substitution of a combination of two other letters is "permissible," For instance, in place of the

sound, how are you to know when the two letters are to be pronounced individually and when together, in other terms, whether you are to read ashal as as-hal or ash-al? Considered from the outset as a genuine alphabet, and not as a mere artificial contrivance for transliterating another alphabet, it, of course, admits of no confusing alternatives, such, for example, as allowing ch or kh to be written at the will of the transcriber for \(\delta \). Each Latin character, too, retains its identity, its personal individuality, its pure Latinity, so to speak, without disfigurement by over-heavy or wrongly-placed appendages. The letters are modified solely by additions, not by organic charges of form; and those additions are of the simplest and slightest sort—dots and strokes—such as can be read and written with the utmost ease, and printed with the utmost facility and distinctness. These diacritical marks, as they are usually styled, are all superscript or subscript, never lateral adjuncts, disturbing the letter's perpendicular simplicity and obscuring its outline. In Spitta, too, there was the sense of the artist as well as the wisdom of the scholar and the cunning of the craftsman—another essential for the profession of the alpha-

g, with the double backward and forward stroke under it, he may write for egen the combination gh; instead of s with the same subscript double stroke he may, at his own sweet will, write sh. Again, if it does not please him to put two dots under a t (to express $t\hat{a}$) he is allowed to put only one. But it is hardly worth while to mention the other absurdities of this scheme, of which there are many. The evident dissatisfaction with the report of the committee felt by that high Arabic authority, Dr. Albert Socin, is not strange, although his expression of it seems not by any means as critically severe as it might well have been - a forbearance which may possibly have arisen from his personal relations to the committee. The same may be said of the strictures upon the Geneva scheme in a more recent brochure, "Die Transcription fremder Alphabete " (Leipzig, 1897) by Professor Ernst Kuhn and the distinguished librarian, Hans Schnorr von Carolsfeld, of Munich. This little work is intended particularly for the use of book-cataloguers, that is for calligraphic purposes. Otherwise useful, it is perhaps marred by giving too little consideration to the exigencies of typography. It seems to grant the impropriety of j = soft g, but decides to use it; and it abandons, with reason, the "permissible" variants of the Geneva report. betist, if we may coin that term. No unseemly, outré, non-homogeneous or non-accordant letters (like those with which many who attempt to follow in the footsteps of Cadmus are so apt to disfigure their text) break the neat uniformity of the lines, paragraphs and pages which are written or printed with these Egyptian characters. 1)

One marked instance of Spitta's scholarly, practical sagacity — unusual because both scholarly and practical in an extreme degree — is his treatment of what may possibly be styled the *i*-group. His employment of the i—the true consonantal i—for the sound expressed by the final letter of the Old-Arabic alphabet is warranted on historical, philological and typographical grounds. It is sanctioned also by general usage, since a considerable majority of the peoples making use of the Latin alphabet in any form have adopted it as the representative of that phonetic element. In fact only the English, the French and Portuguese, and the Spanish give to the j another value, and those nationalities all differ from each other in the character of that value—the English sounding it like soft g, the French and Portuguese like zh, and the Spanish like the German guttural ch. Spitta's employment of it for its legitimate purpose enabled him to avail himself of the character y — another i-letter — for the rightful long sound

t) If any curious person desire to see a noteworthy example of alphabetical uncouthness let him examine either of two works—one by an Austrian and the other by an English professor. The first has little to do with the newer Egyptian speech, is entitled "Die Transcription des Arabischen Alphabetes" (Wien, 1860), and is by Professor H. A. Barb. The other is "A Handbook of Modern Arabic" (London, 1866), the author of which is Professor Francis W. Newman. Both are curiosities, each in its own way. Of that class of works which attempts to reproduce Egyptian sounds by the unaided use of the English alphabet there are no end of specimens. The method they favor may be styled the dragomannic system of transcription—for many of them are compiled by ambitious Syrian or Egyptian interpreters. But whatever be the nationality of their compilers they are almost equally entertaining to the orthographical student.

of i (that is, of ie in shield). This selection proves how carefully he had studied the typographical side of alphabets. He comprehended the inevitable inconvenience, in printing, of an accented i—the accent, after slight usage. almost invariably breaking off from the thin and frail body, or becoming so worn or battered that it is no longer distinguishable from the ordinary dot of the letter. Even a tyro in the art of printing would comprehend the utter impracticability of adopting, in an alphabet for general use, an accented i (whatever may be the form of the accent) to express any sound of very frequent recurrence. Furthermore to accent an i—so far as printing is concerned — is to deliberately disfigure it by removing one of its essential features, since the dot must generally be eliminated to make place for the accent. The adoption of the j for the consonantal Arabic $j\hat{c}$, and of y for the long i-sound (as in fiend), are of themselves sufficient to demonstrate the study, the acumen and the broad discernment brought by Spitta to the execution of his arduous undertaking.1)

¹⁾ One of the absurd phases of our wonted extreme Englishness - so often satirized even by ourselves - is our demand that foreigners, in our intercourse with them, adopt and use, for our especial comfort and convenience, English customs and forms. If we do not succeed in bringing this about we cannot too severely censure the outside world for thus failing to cut its cloth according to our measures - than which we can imagine none better. Such a national habitude is not merely national obstinacy. It is often, if we but knew it, an unwitting acknowledgment of our own ignorance or backwardness in certain fields of life or activity; or mayhap an equally unintentional confession of slowness of comprehension beyond certain intellectual limits. An example in point is the tardiness of the whole Anglo-saxon world in accepting the metrical system - long since naturalized even among our sister Germanic peoples. That this English trait is as striking in linguistic matters as elsewhere the pages of Notes and Oueries - to cite one particular witness - abundantly and constantly testify; and everybody will recall the case of the American diplomatist who thought that all foreign governments should pass strenuous laws forbidding their subjects to speak any language but English. A student of almost any race but our own, with the fine early training given in so many continental schools, can readily

Something must be said in this place of the four semi-vowels to which Spitta had recourse in reducing to writing the spoken Egyptian, in order to express the more obscure vocal articulations. These find no place in an alphabet for permanent practical and popular use. That it is hardly the province of such an alphabet to indicate the more delicate shades of sound Spitta was himself aware. He expressly states that, in transcribing, he has largely confined himself to the simple vowels, a, i, and u, instead of always endeavouring to reproduce with exactness the obscurer vowel-tones, "da einestheils solche feine Nüancen doch wieder nur durch conventionelle Zeichen wiederge-

comprehend that no Latin character so fittingly represents the consonantal i-sound as does the letter j, but anybody who peruses the English philological literature of the day will frequently have occasion to observe that even experienced English-speaking writers on linguistic science cannot wholly rid themselves, in this respect, of their intellectual insularity; while in the case of less learned people the prejudice against the historical and true orthographic use of j arises as much from a felt lack of mental quickness, training or adaptability, as from any other sentiment. Nothing seems simpler to the average foreigner, when he is anthoritatively told that j is the best representative of the Arabic je than to so use it; but the average Anglo-saxon will none of it. He says, or feels: - "Let the 'blamed furriner' do what he pleases with his is. I am going to stick to my vs." But the same obstinate Englishman, when he undertakes to learn German must of necessity acquiesce in the fact that our v-sound is to be expressed by j. Why should he find it more difficult to utter the Egyptian já (oh!) than the German ja (yes) — the two being pronounced virtually alike? On the other hand, in acquiring French, he must perforce be content to know that j, in that language is pronounced like our z in azure, for he would hardly insist that the French be obliged to write z'ai (instead of j'ai) to suit his English eye and ear. In view of the differences in the orthography of the various modern tongues which must be mastered in these days of international intercourse, it ought not to require either a great brain or an extraordinary patience, to fix in one's mind the fact that the learner must write, in the idiomof Egypt, jigy (not yigy), jitkallim (not yitkallim), jóm (not vóm), carabyje (not carabyye or carabiye). This letter j is, in truth, one of the many confusing elements in our hybrid English alphabet. We write gem, gin and George, but also jam, jelly and James. After the same fashion we articulate the initial consonants of get and genial, of gipsy and girdle quite differently, while the two varying orthographical forms, gaol and jail, are sounded exactly alike. The same is to be said likewise of the character y. We treat it as a consonant in you, yellow, steelyard, vonder, and as a vowel element in quay, key, stray, try, rely, while die and dye,

geben werden können, die das Transcriptionssystem schr complicirt machen würden, andererseits man bei richtiger Articulation der Consonanten von selbst seiner Stimme die Biegung giebt, welche der Aussprache am bequemsten ist." Another writer has perhaps expressed the same idea more forcibly by saying that "An alphabet intended for practical purposes can never aim at giving, as it were, a minute image of the varying sounds of language. Letters are meant to indicate the sounds of words, and not to photograph every shade of sound, that occurs in spoken languages." U Such characters as have been referred to are naturally of utility in a dissertation markedly phonological in

like lie and lye, are as similar in pronunciation as they are diverse in orthography. It is an alphabet like this which the unlettered - and some who style themselves lettered - desire to offer to any still unwritten language in search of a literary medium! In reviewing the literature which concerns itself more or less intimately with the current Egyptian speech it will be found that it is the product of two conflicting classes of persons, all of whom, as friends of Egypt, are quite willing that the Egyptians shall learn to read and write. But each class attaches to its good will its own uncompromising condition. The first group consists of those who have passed safely through the wearisome hours necessary to be spent in order to make one's self master of the Old-Arabic alphabet; they kindly wish to make the rest of the world undergo the same ordeal; and they thus insist upon applying this antiquated and incommodious alphabet to everything that can possibly be styled, in any sense, Arabic. It is not even sure that they would not be gratified to witness its extension to other families of languages as well. In other words they say to the mass of the people of Egypt: - "Spend all the school-time - all the intellectual labour - which you can afford to spend, in the doubtful endeavour to familiarize yourself with this tedious alphabet - then go plough your fields, gather your crops, support your families, and thank God all the rest of your lives that you know the Arabic alphabet when you see it!" Then there is the second class of Egypt's benefactors, which cannot conceive of any alphabetical dress for the Egyptian speech other than that ungainly one so unfortunately and so inconveniently worn by the English language. These benevolent people declare that it is quite impossible to understand jiktib and jimsik, unless you write them yiktib and vimsik, or to read jasmyn or jemyn unless you write them yasmeen and yameen. Between these two classes the unhappy Egyptians, who stand waiting, with the untiring patience bred of conturies, for the blessing of a broader culture, may indeed feel that salvation lies only in getting rid of all their friends.

 Outline Dictionary for the Use of Missionaries, Explorers and Students of Language, by Max Müller (London, 1867), p. XXIV. its purpose. To retain them in journals and books designed merely for general reading, or elementary instruction, would be like attempting to employ, in writing our own language, the multitude of signs, symbols and figures made use of by Ellis in his invaluable scientific treatise on "English Pronunciation;" or like trying to print one of the principal Romance or Germanic tongues of Europe by means of the "Standard Alphabet" of Lepsius. In the same way it appears allowable, if not advisable, to abandon, in practical usage, the employment of Spitta's semi-vowels in their character of "Zwischenvocale," that is, with the object of filling the hiatus (or cessation of utterance) caused by too many sequent consonants. This hiatus, although certainly more marked in the pronunciation of the Semitic dialects, is also sufficiently noticeable in some of the Latin languages, in which no expedient of avoiding it has ever been generally adopted. In Italian, for instance, the rule which requires Ispagna (instead of Spagna), after a preceding consonant, is fast falling into disuse. In such forms as "go over" and "wasps sting" in English, a similar hiatus is observable. It must then be always remembered, in studying the two important productions of Spitta, that they are in a great degree pioneer works. He was endeavouring to put on record, for the first time in an intelligible way, and at the same time in a final shape, the principal phonetic peculiarities of the Cairene dialect. But he never, in doing this, lost sight of the fact that his main and greatest purpose was, as has been said, to provide a proper means of writing that dialect,—that it might become an efficaceous instrument for the education of the whole Egyptian community.

The Alphabet.

It is to be noted first of all that the new Egyptian alphabet has one feature in common with the old alphabet of the written Arabic and with all other Oriental alphabets—it knows nothing of capital letters. In this respect, too, it fulfils the dream of the philologist—of men like the founders of modern Germanic linguistic studies, the brothers Grimm, in whose noble lexicological work capitals have been discarded. They, as many other profound students of language have done, looked forward to the day when written and printed speech everywhere shall be simplified by the total abolition of the uncial alphabet. The continued use of capitals, after the exigencies of current writing had led to the adoption of the smaller or technically-styled "lower-case" letters, is a heritage from the mediæval scribes, who loved variety more than simplicity, ornament more than utility, elaborate decoration more than beauty unadorned. Without capitals—large or small—the cost and toil of typography would be sensibly diminished—not to speak of the economy of labour effected in teaching and learning. In this latter regard, it would be interesting to understand exactly the feelings of a child, when, after convincing himself, through a period of much distress, of the individuality and identity of A, B, C, D, E, he finds himself confronted by another long series of characters—a, b, c, d, e,—very different in appearence, which he is told are positively the same thing, baying the same names and powers, although he speedily finds that he has to begin to exercise all over again his not vet very robust mental faculties before he can fully complete his alphabetical knowledge. The Egyptian alphabet possessing no capitals, initial words of sentences, as well as names of persons and places, begin with the same kind of characters as all other words—as there is indeed no reason why they should not—and so there is one perplexing orthographical rule the less to learn and apply.

Compared with the Old-Arabic alphabet the Egyptian ABC has 34 characters instead of the 130 or more necessary to represent by the former all the consonantal and vocal elements. The so-called "chancery" Arabic—that bar to Saracenic progress—in its journals and other published works, is obliged to employ this huge Old-Arabic conglomeration of alphabetical signs. Imagine a compositor in an English, French or German printing-office condemned to handle 130 distinct types (which do not even include any upper-case characters, nor any marks of punctuation, nor any numerals)! But the evil does not end with the printer. The reader likewise suffers; and, above all, education suffers. Nobody can fail to be struck by the irregularity and distortion of the Arabic printing-alphabet, so far removed, in that respect, from the graceful symmetry and uprightness of the Kufic and other early forms of writing; while the eye is wearied by the indistinctness of the finer lines, the minuteness of the vowel-marks, and the imperspicuity of the various diacritical points and strokes, —all of which are so liable to be shattered or mangled by a little usage as often to make half a dozen words, in a page or column, nearly illegible. No educational torture can be more cruel than to subject the tender eyes of children to such a typography. Many western scholars, although commencing their Arabic studies in adult years, can testify, by sad experience, to the injury inflicted by the Arabic calligraphy upon human eye-sight; and the typographical characters are even more hurtful, because

much smaller and less clear. To be concise it may be said that the Old-Arabic alphabet, especially as it is used in the press, seems designed to promote illegibility, and to limit the spread of knowledge. With its continued service, as the handmaid of speech, the highest stage of general, or popular, enlightenment can never be attained in the east. But sober sense, uninfluenced by the faddishness of the scholastic specialist on the one hand, and the sentimentalism of the religious bigot on the other, will sooner or later bring about the substitution everywhere of a better medium both for the pen and the press.

In the phonetic, as in the inflexional forms of the Egyptian dialect there are many deviations from the mothertongue. Just as in the case of the verb, the passive voice and various modal peculiarities, as in the case of the noun, the dual, the feminine plural and the case-endings have dropped away, so in the pronunciation three sounds, once expressed by the Old-Arabic letters =, i and i, have disappeared, and, of course, require no written or printed representatives. Three of the existing Egyptian consonantal elements (t, d and s)—and possibly a fourth (h)—are not unlikely to follow, at a not very remote period, since their enunciation, in some special words, at least, not infrequently goes over to the sounds of t, d, s and h respectively. Moreover most of the attributes formerly belonging to the first letter of the Old-Arabic alphabet have ceased to be exercised; and its position, as a distinct phonetic expression, has thus been greatly weakened. It is for this reason that it seems not improper to give its place to the vowel-group, which heads the living Egyptian alphabet.

In this group the long vowels are indicated, except in the case of the long i, by the circumflex accent above the

corresponding short-vowel character. If one carefully examine the reasons for the use of this diacritical sign, rather than of the customary long-accent mark (as in a, for instance), they will be found to be not altogether illogical. In writing, the circumflex accent cannot interfere, so to speak, with the preceding or the following letter. It cannot well be prolonged in either direction, but must be begun with the upward stroke and ended with the downward; it thus occupies only the space existing above the letter, and included in the outline, or contour, of the character to which the sign is attached. The ordinary longaccent sign, in the rapidity of calligraphy, is easily carried too far. In printing, the circumflex has the advantage, as every printer knows, over the slender long-accent line in being less easily marred or broken; this is owing to its shape, and to what is technically described as its greater weight of metal. So much for this feature. The long i-sound, as will be noticed, is an exception to the system followed in portraying the other long-vowel sounds; instead of a circumflex i, the letter γ is employed to express this sound, and some weighty reasons have already been given for this variation in the graphic scheme of the long-vowel elements. But there is an obscurer aspect—a more imaginative view - of this instance of discontinuity in the vowel method, which is worthy of a word, even if that word must be addressed only to minds of a certain sensitiveness of observation. This view of the matter has reference to that subtle law of orderly beauty, which makes a too symmetrical symmetry, so to speak, repulsive; and to that other law, which proves an unbroken series of things to be less striking, and therefore less easily fixed in the memory, than an interrupted series. In all the arts the mind shrinks from a succession of unvaryingly similar objects; a list of words

all ending in -tion is more difficult to acquire by heart than if, now and then, words of different terminations intervene; and an alphabet of letters all round, or all quadrangular, in their external lines, would be neither attractive nor of facile acquirement. But this digression is running too near the boundary-line of fancy to be continued.

As to the consonants, the unusual, or non-Roman characters are eight in number, representing sounds not expressible by single letters of the Latin alphabet. Of these, four, t, d, h and s are the graphic representatives of sonant elements differing merely in a slight degree from those expressed by t, d, h and s respectively. This divergence could not be denoted by diacritical marks above the first three of these consonants because of their height, which is so great as to occupy all the space above the line; while, in the case of the s, that character, with a superscript sign, has another office, that is, to designate the English sh-sound (s). The dot is the simplest form of diacritical distinction, and is thus properly significant of the slightest shade of vocal dissimilarity. Placed below the Latin letters representing sounds of an analogous character, it thus completes the additional characters required. Another letter, the h, describes an articulation of the voice which the principal European alphabets are able to portray only by the cumbersome device of a combination of letters—as in the German by ch. Some of the motives for the employment and position of the distinguishing subscript curved stroke are identical with those alluded to in speaking of the circumflex long-vowel mark. Its convenience, both in writing and printing, will be evident from a comparison with the other devices, in the various transliteration schemes, for denoting the sound in question. The letter syn (s) represents the English

sh-sound, or the German sch-sound. Being a pure sibilant it was almost inevitable, in devising a proper character for it, that its base should be the Latin s. The addition of the customary acute-accent sign was a clever choice, partly because of its ease in writing and simplicity in form, partly because it is made use of nowhere else in the Egyptian alphabet. The letter is, on this account, immediately recognizable, and simple as is its distinguishing adjunct it is plainly differentiated, being superscript, from its near relative, the $\hat{sad}(s)$. It appears to be much more appropriate, in every way, than the representatives of the same sound in the Lepsius alphabet, and in some other schemes. The two remaining alphabetical forms required no little amount of reflection. They are the $\dot{g}\hat{e}n$ (\dot{g}) and the cên (c). The former describes a sound, which, to some ears, is nearer an r than a g, and for it, in some of the transcriptional methods, an r, with a diacritical mark, is employed. But the highest linguistic authorities are united in treating it as a guttural rather than a labial. Latin g was, therefore, preferred as the base-letter. The shape of the g made the diacritical mark necessarily superscript, and again the simplest one was chosen; again, too, the superscript is in a certain respect unique, for no other letter, representative of a non-Latin sound, bears it. There are thus three dotted letters—the i, the & and the j. The character used for the character u ification of the upper half of the Old-Arabic letter (=). In the "Grammatik" of Spitta the German printers used for it the inverted comma, which, though similar in form, is too inconspicuous, but in the "Contes Arabes" this was replaced by a specially made and more distinctly observable type. Dr. Spitta, as is known from his own lips, did not accept this solution of the difficulty without some reluctance. The marked dissimilarity of the cn to any Latin sound made the choice of a graphic representative a matter of embarassment. As usual it was desired to pay heed to its typographical uniformity with its fellows, but many suggestions to effect this purpose were one after another rejected—all for important reasons. The sound is the strongest of the vocal utterances made by the almost unaided breath (faucal sounds, as they are styled), and like all these breath-letters has something of the character of a vowel. Holding thus a position half way between a consonant and a vowel, it may be looked at from the point of view of either as only half a letter, and, as such, the type employed is not wholly inapt. Glancing down the printed page the letter produces something of the effect of the quotation-marks—it is however rarely doubled—in European typography, and is therefore neither anomalous, nor disagreeable to the European eye. It is assuredly less offensive than the character used in its place in some of the transliterating methods—a slightly conventionalized but still wholly unlatinized form of the Old-Arahic letter con

Of the remaining 16 letters there is little to be said. They are each familiar to the eye—as their sounds are known to the ear—of all who are accustomed to use the Roman alphabet. The $q\hat{a}f(q)$ has in Egypt a double pronunciation, differing in its value in different sections, but these are only dialectic variations, and do not make two separate characters at all essential. The k, with an under-written dot, sometimes used to express this element, as well as the other characters occasionally adopted for this purpose, do not seem to be any better adapted for the purpose than the q, which has, at any rate, the advantage of being purely Roman. Of the $j\hat{c}$ we have spoken

fully elsewhere. The Egyptian does not employ the Latin c, which, even in many of the European alphabets, is redundant; it is replaced, in the transcription of foreign proper nouns, by the syn (s) or the kef (k). Both the ρ -sound and v-sound of English speech are unfamiliar to the Egyptian tongue; in writing foreign names containing these letters recourse must be had to the other labials, $b\hat{c}$ (b) or $f\hat{c}$ (f). In the same way the foreign x is separated into its two elements, and expressed by ks.

It should, finally, be understood that the order of the alphabet, as given in these pages, is not the work of Dr. Spitta. He wrote and treated the vowels apart, as is usual in the case of the Old-Arabic vowel-signs, and he gave the remaining letters in the order of the corresponding consonants in the earlier alphabet. For his immediate purpose this was doubtless wise, but, if the alphabet be generally used, and particularly if it be used in the schools, a more rational grouping appears advisable; and there need be no hesitation in adopting such an arrangement while the alphabet is still in the initiatory stage of its existence. The order, as here printed, lays no claim to perfection, but is merely an attempt to make the alphabet a little more easy of acquisition to young learners, and a little more convenient to all likely to familiarize themselves with it. It is not too much, perhaps, to hope that the opponents of a simplified or reformed alphabet will refrain, on this point, from objections. For even in applying the Old-Arabic alphabet to the dialects derived from the ancient tongue, certain changes would necessarily be made, since some of its letters have become totally obsolete, and would naturally drop out. It is, in any case, the letters of the new alphabet which are of importance and not the arrangement of them.

Conclusion.

Careful study of its details—especially if supplemented by a short period of use—can hardly fail to convince the investigator that it would be difficult—to say the least—to create an alphabet better adapted to its purpose than that of Spitta; in truth—as was stated in the first paragraph of these observations—there are few if any existing forms of speech, which possess one at once so complete and so simple, so available for all the exigencies of writing and printing. Its general application to the national dialect of Egypt, would forthwith immensely facilitate the extension of knowledge, and inestimably lessen the task of the teacher throughout all the Nilotic lands; and this may well be brought about without, in any measure, affecting the position of the Old-Arabic alphabet as the medium of the venerated classical literature. Nor would such a step detract from the sanctified character of that alphabet, with which the sacred Koranic scriptures are written. The Bible of the Russians is printed by means of the Cyrillic alphabet, notably differing from that made use of in the modern Russian. Our own English Bible, in its existing version, has many verses and phrases which can hardly be pronounced to be strictly modern English. The Catholic church regards only the Latin vulgate scriptures as authoritative, but the Catholic nations all have secular literatures in their own vernacular. The Copts daily use the Old-Arabic alphabet, and the "chancery" Arabic, in their correspondence, while speaking the Egyptian idiom, although their holy books are in the ancient Coptic, having its own alphabet. There are other instances, even in the east, of similar alphabetical and literary evolutions

and revolutions; and there seems no good reason why these examples should not be followed to advantage by nationalities of whatever race or creed. Religion in no wise suffers thereby, while the progress of the people is immeasurably accelerated.

With such a graphic medium as the Egyptian alphabet there is little need of waiting for the new Dante, whose advent Spitta, in the closing phrases of the preface to his "Grammatik," seems to hint at. Other efficient forces are already at hand. Hundreds of young men are now constantly receiving an excellent training in the higher schools of the Egyptian cities—schools which are yearly growing better. These sons of Egypt are both intelligent and patriotic. Let all these youth of the newer generation put their shoulders to the wheel. Let them give their influence—great, if properly applied—to the development of the popular tongue, and there will soon follow the unapproachable blessing of universal education, with its inevitable result of a broad literature "for the people, of the people and by the people." The present government of Egypt might well lend its aid—as it is at last in a position to do-to such an effort. An American writer has characterized the marvellous financial, commercial, agricultural and moral transformation of Egypt, effected in these later years, as "the most splendid Anglo-saxon achievement of the century." Why cannot the men who have been the potent factor in bringing about this beneficent material revolution, now open the gate, as well, to the spiritual development of the people they rule so ably and so honestly? There is but one path that passes through that gate, and that path can be traversed only by a nation educated in the language it understands. That language is already the daily speech of social intercourse, of the family, the

shop and the farm. Why should it not become the medium of an education, destined not only to elevate the nation which has its home under the palms of the Nile, but perhaps to revive, under a nobler form, the ancient glory of the whole Saracenic world?
